

REPORT MANAGER

Software Inventory Report_DE

(German Translation)

Issued: December 21, 2012

Software Inventory Report

The Software Inventory Report displays a summary of the software assets discovered in a customer's network. Software assets are displayed in a matrix grouped by a software name or by the device on which the software is installed. You can optionally include the information about license compliance for each application. The report can be filtered to present all discovered software or identify devices with specified software packages

Use this report to help customers track software assets and identify details such as software name, version, vendor, number of detected installations, and number of available licenses.

This report allows you to include the following subsections:

- Inventory Grouped by Device displays devices and the software that is installed on them or
- Inventory Grouped by Software displays software and the devices on which it is installed.

You can optionally include the information about license compliance for each software asset.

Note: If you would like to include license compliance information in the report, you must also have the License Compliance service set up in N-central.

Requirements

The minimum Report Manager release to run this report is 4.0 GA (4.0.0.157).

N-central Dependencies

Asset Discovery

Files Included

This package contains the following:

- An RDL custom report file (Software Inventory Report_DE.rdl)
- An XML configuration file (Software Inventory Report_DE.xml), which will configure the UI control parameters for the report when uploaded
- A sample PDF of the report (Software Inventory Report_DE.pdf)

Uploading the Files to Report Manager

The RDL file included in this package is ready to be uploaded to Report Manager. Each RDL file also has a corresponding XML file that configures the UI control details.

1. Sign in to the Report Manager Administration Console.
2. Click **Custom Report Management**.

3. Click **Upload Custom Report**.
4. Click **Browse** to navigate to the file you want to upload.
5. Select the RDL file and click **Open**.
6. Select the **Upload a Config File** checkbox.
7. Click the **Browse** button that appears and navigate to the XML configuration file that corresponds to the RDL file you are uploading.
8. Select the XML configuration file and click **Open**.
9. Click **Next** to upload the report.
10. For information on UI control configuration, refer to the Administration Console online help, **Create Custom Reports > Templates > Software Inventory Report**.

Disclaimer

This document may include planned release dates for service packs and version upgrades. These dates are based on our current development plans and on our best estimates of the research and development time required to build, test, and implement each of the documented features. This document does not represent any firm commitments by N-able Technologies Inc. to features and/or dates. N-able Technologies will at its best effort, try to meet the specified schedule and will update this document should there be any significant changes. N-able Technologies reserves the right to change the release schedule and the content of any of the planned updates or enhancements without notice. Publication or dissemination of this document alone is not intended to create and does not constitute a business relationship between N-able Technologies and the recipient.

Feedback

N-able Technologies is a market driven organization that places importance on customer, partner and alliance feedback. All feedback is welcome at the following email address: feedback@n-able.com.

About N-able Technologies

N-able Technologies is the global leader in remote monitoring and management software for managed service providers and IT departments. N-able's award-winning N-central platform and complementary toolsets, backed by best-in-class business and technical services, are proven to reduce IT support costs, improve network performance and increase productivity through the proactive monitoring, management and optimization of IP-enabled devices and IT infrastructure. N-able is 100% channel-friendly and maintains operations in North America, the U.K., the Netherlands and Australia.
