

REPORT MANAGER

AV Status Report_DE

(German Translation)

Issued: December 21, 2012

AV Status Report

The AV Status report summarizes information gathered by the AV Status service and the AV Defender services on the state of various antivirus solutions across a customer. Endpoint Security information is also included.

Use this high-level report for a complete security picture, especially if your customers are not using the integrated Endpoint Security.

The report includes two default sections:

- The **AV Status Summary** section includes three pie charts: AV Solutions (including if no antivirus software was detected), Update Status, and real-time AV Scanning.
- The **AV Status Details** section provides a breakdown of antivirus monitoring by Device Class, device and antivirus solution.

Optionally, you can include an **AV Threat Counts** table, which provides the details of virus detections and actions by device class, device and antivirus solution.

Note: In the **AV Threat Counts** table, the column **Count of Successful Virus Cleans** includes viruses that were blocked from execution, as well as viruses that were cleaned from the system.

Requirements

The minimum Report Manager release to run this report is 4.0 GA (4.0.0.157).

N-central Dependencies

N-central dependencies: AV Status service (formerly AV Security Center), AV Defender services (available in N-central 9.0 SP1 Hotfix 1 and greater)

Files Included

This package contains the following:

- An RDL custom report file (AV Status Report_DE.rdl)
- An XML configuration file (AV Status Report Parameters_DE.xml), which will configure the UI control parameters for the report when uploaded
- A sample PDF of the report (AV Status Report_DE.pdf)

Uploading the Files to Report Manager

The RDL file included in this package is ready to be uploaded to Report Manager. Each RDL file also has a corresponding XML file that configures the UI control details.

1. Sign in to the Report Manager Administration Console.

2. Click **Custom Report Management**.
3. Click **Upload Custom Report**.
4. Click **Browse** to navigate to the file you want to upload.
5. Select the RDL file and click **Open**.
6. Select the **Upload a Config File** checkbox.
7. Click the **Browse** button that appears and navigate to the XML configuration file that corresponds to the RDL file you are uploading.
8. Select the XML configuration file and click **Open**.
9. Click **Next** to upload the report.
10. For information on UI control configuration, refer to the Administration Console online help, **Create Custom Reports > Templates > AV Status**.

Disclaimer

This document may include planned release dates for service packs and version upgrades. These dates are based on our current development plans and on our best estimates of the research and development time required to build, test, and implement each of the documented features. This document does not represent any firm commitments by N-able Technologies Inc. to features and/or dates. N-able Technologies will at its best effort, try to meet the specified schedule and will update this document should there be any significant changes. N-able Technologies reserves the right to change the release schedule and the content of any of the planned updates or enhancements without notice. Publication or dissemination of this document alone is not intended to create and does not constitute a business relationship between N-able Technologies and the recipient.

Feedback

N-able Technologies is a market driven organization that places importance on customer, partner and alliance feedback. All feedback is welcome at the following email address: feedback@n-able.com.

About N-able Technologies

N-able Technologies is the global leader in remote monitoring and management software for managed service providers and IT departments. N-able's award-winning N-central platform and complementary toolsets, backed by best-in-class business and technical services, are proven to reduce IT support costs, improve network performance and increase productivity through the proactive monitoring, management and optimization of IP-enabled devices and IT infrastructure. N-able is 100% channel-friendly and maintains operations in North America, the U.K., the Netherlands and Australia.
